

CONTACT-MANAGER-APP

➡ HOW TO RUN THE APPLICATION:

1. Download the zip file named "Contact-Manager" from my GitHub repository.
2. Extract the downloaded zip file to a preferred location on your computer.
3. Open the extracted folder using VS Code (VSCode) or any preferred code editor.
4. Open the integrated terminal within VSCode
5. Navigate to the "Contact-Manager" directory within the terminal.
6. Run the application using the command 'npm start'.

➡ FEATURES

When you start the server in any browser the dashboard looks like cool with Contact Page as its Heading, on left side there are two buttons named Contacts and Chats & Maps, which can redirect us to the saved contacts and map with that indicates the country name, total number of active, recovered cases and deaths in that particular country as a popup.

If there is no contacts have been saved then it will show No contact found please create from create contact button. When clicking on create contact button the firstname, lastname and status (active and inactive) fields are visible now enter the details and select the button active or in active then save the contact by clicking the button save contact. After saving the details the page will redirect to the saved contact there we can edit and delete the contact. And again click on Create Contact to create another contact details.

And finally by clicking on Chats and Maps we can see the map with that indicates the country name, total number of active, recovered cases and deaths in that particular country as a popup.
